MEMORANDUM FOR RECORD

SUBJECT: Trip Report - Advanced Training 19 - 23 Mar 84 (U)

1. (U) Reference:

(U) Memorandum For Record, subject: Advanced Individual Training for CENTER LANE Personnel (U), dated 19 July 1983.

(U) Consultant Personal Services Agreement, 19 July 1983.

2. (S/CL-4/NOFORN) From 19-23 Mar 84, Mr. McMoneagle and the undersigned conducted advanced training IAW the above references. The purpose of this fourth week of advanced training was to further verify somatic electrical responses evidenced during previous weeks. Photographs in sealed envelopes were used as cuing for remote viewing sites. As was previously indicated, somatic electrical responses reflected the accuracy of the descriptions.

3. (S/CL-4/NOFORN) Training activities were set aside on 21 Mar in response to a request for operational data. Two operational interviews were conducted on that day using a Hemi-Sync environment of multiple frequencies (100Hz base), 1.5Hz binaural beat and 200Hz base, 4Hz binaural beat). The source was apparently able to acquire the appropriate target (see Project 8404). Somatic electrical responses indicated contact with the target. Both the source and the interviewer enjoyed working operationally in a Hemi-Sync environment. This was the first time operations have been conducted using a Hemi-Sync environment. It is recommended that the protocol be expanded to include operational use of the Hemi-Sync environment. //

SUBJECT: Trip Report - Advanced Training 19 - 23 Mar 84 (U)

4. (S/CL-4/NOFORN) During the week, "discrete state" exercises were conducted to facilitate sources attempts to obtain higher resolution site data. On 22 Mar 84, source achieved what is called "First Stage Separation." This state was characterized by recognizable subjective source reporting and appropriate somatic electrical potentials.

5. (S/CL-4/NOFORN) It is recommended that advanced training IAW the references in paragraph 1 be continued with Mr. McMoneagle. It is further recommended that this training be directed towards refinement of the "discrete state." This recommendation is made in light of the fact that Mr. McMoneagle will be retiring soon and he is best equipped to deal with the issue of suspected increased target resolution during the "discrete state." The probability of increased target resolution in the "discrete state" has remained unexamined since the start of GRILL FLAME/CENTER LANE. Anecdotal reporting of spontaneous "discrete state" observations always includes descriptive verbiage of the clarity of such observations. This sense of clarity is lacking in the elementary stages of psychoenergetic performance. Training in the "discrete state" provides this office with a unique opportunity to resolve image clarity in an experienced, reliable source. Refinement of the "discrete state" may well be the psychoenergetic solution to increased target resolution.
